State of Washington Dept of Commerce Webinar September 13, 2012

Research Tips, Tricks and Techniques

Search Engines

Directories

- Work like a phone directory (e.g. YellowPages)
- Good for broad searches (e.g. an industry)
- Examples:
 - Yahoo! Directory: www.yahoo.com/dir

Index Engines:

- Work like the index of a book
- Good for specific searches (e.g. a company, person, or industry segment)
- Examples:

Google: www.google.com
 Yahoo!: www.bing.com

o Ask: www.ask.com

Boolean Searches

Examples of Searches

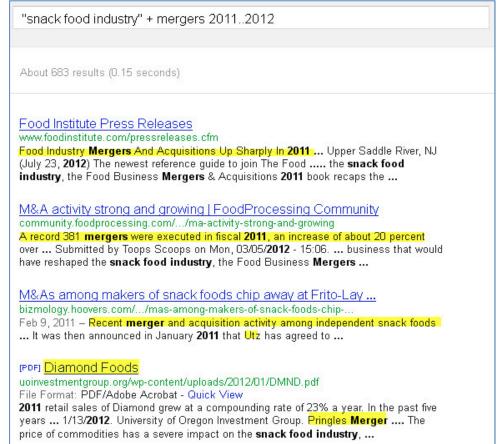

- General
 - To find a document including all search terms
 - Word1 + Word2 + Word3
 - Word1 AND Word2 AND Word3
 - To find a document including any search terms
 - Word1 OR Word2 OR Word3
 - To find a document including Word1 but not including Word2
 - Word1 Word2
 - Word1 NOT Word2
 - To find a document including a whole phrase
 - "Whole phrase here"
- To find lists or databases of companies

- "Industry segment here" + list
- o "Industry segment here" + database
- Advanced Search
 - Remember to use the Advanced Search (sometimes called Power Search) feature as a "cheat sheet" for Boolean searches

Google Search Tips

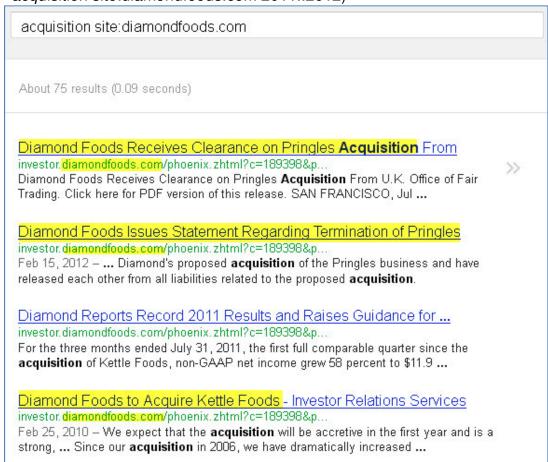

Historical Search

- Limit your results by using a date range in your Boolean search. Separate the range by two periods.
- Example: To find information about mergers within the snack food industry over the past year, enter the search term "snack food industry" + mergers 2011..2012

Site Search

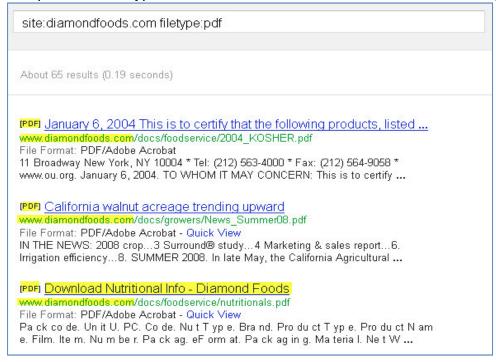

- Limit your results by searching only on a specific website. Use the command 'site:'
 followed by the website URL. Can be found in most Advanced Searches.
- Example: To search any mention of an acquisition on Diamond Food's website, enter the search term *acquisition site:diamondfoods.com*
 - For even more narrowed results, combine with the historical search (e.g. acquisition site:diamondfoods.com 2011..2012)

File/Document Search

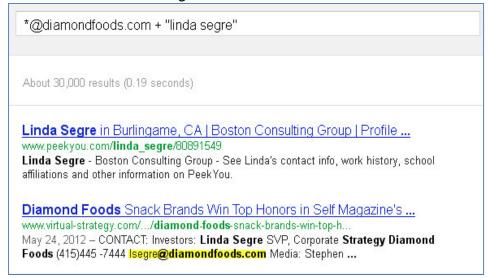

- Limit your results by searching only for a specific type of file or document. Use the command 'filetype:' followed by the type of file you want to find (pdf, ppt, xls, doc, rtf....). Can be found in most Advanced Searches.
- This can be particularly helpful when trying to find product guides, user manuals, brochures, etc.

Example: For product info, type in the search term, site:diamondfoods.com filetype:pdf

Finding Unknowns

- Use asterisks to fill in for unknown words.
- Example: Did you forget a contact's last name? Enter the information you do know, using an asterisks for the unknown factor: "Jami * " + "Whittaker Associates Inc"
- Example: To find an email address for a person (Linda Segre), enter the search term: *@diamondfoods.com + "Linda Segre"

Google Alerts

• Set up Google Alerts to keep tabs on industries, companies, people, competitors, and products. Go to www.google.com/alerts, to keep current on things you are interested in.
